

Dräger HPS SafeGuard Fire and rescue helmet

The Dräger HPS SafeGuard is the extremely lightweight universal helmet for fire and rescue services. Its innovative design combines optimal protection with the highest levels of wearing comfort. Its sporty look, light weight and tailor-made accessories make the helmet a real all-rounder for any challenge.

Dräger HPS SafeGuard

HPS FlashLight Extend helmet lamp (optional)

Integrated 3W high-performance lamp with Power-LED technology

Front plate

Matt back with or without reflective strips and markings

Interface for communication systems (optional)

For connectivity to different communication systems, such as the Dräger HPS-COM

Helmet shell

Produced with high-temperature-resistant composite material

Lamp holder (optional)

Attachment of a standard helmet lamp on the left or right side

Neck guard

Various versions available

Dräger HPS SafeGuard

Benefits

Optimal wearing comfort

Weighing just around 1.25 kg in its basic configuration, the Dräger HPS SafeGuard is one of the lightest helmets in its class. Its innovative design also ensures optimal weight distribution of the fire and rescue helmet. These two factors combined offer you the best possible wearing comfort and the perfect fit for all types of movement – even when crawling. The helmet is characterised by its advantageous weight distribution and the excellent climate characteristics: The excellent thermal insulation helps to protect you when fighting fires, while guaranteeing a balanced climate inside the helmet even during longer rescue missions without respiratory protection. Lots of benefits, all confirmed in external scientific studies.

Ready for every challenge

The multifunctional and sporty design of this compact helmet offers you exceptional protection, without limiting your movements or perception: vital senses such as sight, hearing and sensitivity to heat are not impaired, while at the same time all essential parts of the head are protected. A combination of aesthetic and functional elements makes the helmet attractive as well as safe. Examples include the integration of the lighting and communication systems, and the numerous configuration options and customisation markings available for each helmet. These make it easy to visually identify the role and function of each person.

A helmet for all situations

Thanks to its universal design and multiple certifications, you can make perfect use of the helmet for all key applications required in fire and rescue services. The special endurance testing conducted by Dräger also means that you can rely on the multifunctional helmet to consistently deliver a high degree of safety, reliability and quality. With its fully integrated, highest optical quality visors, your face and eyes are perfectly protected. Moreover, the additional multi-coating feature prevents it from fogging and scratching. A gold coating not only provides the best possible protection against radiant heat but also gives the helmet a stylish look.

Quick and easy helmet adjustment

One size fits all - the protective helmet covers a wide range of individual head sizes from 50 to 67 cm. You can adjust the helmet to your head size in just a few simple steps: The chin and neck strap are quick and easy to adjust. In addition, the adjustment wheel on the back of the helmet is particularly easy to access.

For better visibility

The helmet is available in a wide range of colours. For the best possible protection in conditions of poor visibility, you can also fix reflective strips in different designs all around the helmet, making it easily identifiable day or night. The HPS BuddyLight on the back of the helmet provides additional safety - it ensures that you can be immediately recognisable from behind even in conditions of poor visibility. You can use the individual lighting solutions to illuminate your immediate workspace as needed: our integrated, explosion-proof helmet lamps can be fitted at the front or side and can be handled hands-free.

Lots of options – easily fitted

For your convenience, the construction of the helmet has been streamlined to just a small number of main components, thereby simplifying the spare-parts logistics. You can easily and intuitively attach individual parts and accessories. You don't need any tools to replace the parts. All electronic accessory components can be powered using standard commercial batteries. In addition, RFID transponders and barcode technology also support your logistics processes.

Benefits

Straightforward cleaning and maintenance

Whether manually or mechanically - you can use any common cleaning process on this protective helmet without any problems. In addition, the simple and tool-free removal of just four component parts makes for quick and effective cleaning of some or all parts of the helmet.

Unhindered communication

Thanks to the helmet shell's special design, your ears remain uncovered. For you this translates to improved communication with your team, that is being able to hear and speak to them clearly. Even the perception of background noises is flawless.

Optional integrated communication system

In addition, the integrated Dräger HPS-COM helmet communication unit provides reliable support for radio communication. Alongside its excellent voice quality, its stand-out features include a robust, compact design and easy installation. The new dual-mic technology is ideally suited to all operations, with or without breathing protection.

Optional hands-free thermal imaging camera

The Dräger UCF FireCore hands-free thermal imaging camera gives you a permanent vision of your immediate surroundings, even under the toughest conditions. That allows you to orientate yourself more quickly and safely, while also improving your situational awareness.

System Components

D-4985-2024

Dräger FPS 7000

The Dräger FPS 7000 full face mask series is characterised by a high degree of safety and optimum wearing comfort. Thanks to its proven design and the different sizes, it offers a tight and comfortable fit. The combination of the mask shape with the geometry of the visor offers you a large field of vision.

D-1552-2022-D-1550-2022

Dräger UCF FireCore

The Dräger UCF FireCore hands-free thermal imaging camera gives you a permanent vision of your immediate surroundings, even under the toughest conditions. That allows you to orientate yourself more quickly and safely, while also improving your situational awareness.

Accessories

D-36161-2021

Neck protector

Neck protector with plug-and-click system, can be mounted quickly, securely and without tools. Optionally available in the following versions:

- short Nomex® version with integrated fold
- longer aluminised Nomex® version
- Dutch type cloth version made of three-layer, high-quality Nomex® fabric and an innovative, patented design

Nomex® is a registered trademark of the company DuPont.

D-6280-2026

Integrated helmet lamp Dräger HPS FlashLight Extend

This optional, lightweight, high-performance helmet lamp is designed for use in firefighting operations. Centrally positioned on the front of the helmet, it seamlessly integrates into the design and comprehensively illuminates your immediate working area. It is ATEX zone 0 approved, offering the highest protection class. The Power LED offers multiple light modes (high, medium, low, flashing and off) and runs on standard AAA alkaline or rechargeable NiMH AAA batteries. It features an integrated function and battery test with live battery status indication.

D-21872-2020-D-44789-2015

Standard helmet lamps Dräger PX1, PX1 SHORTY and PX2

These optional explosion-proof helmet lamps with LED technology provide optimal illumination of your extended working area. They can be attached to the right- and/or left-hand side of the helmet using a separate lamp adapter and run on commercially available batteries. Different lamp adapters are available for other standard helmet lamps.

D-35687-2021

Rear Light HPS BuddyLight

This optional LED rear light serves as a warning and indicator light. It is adapted to the back side of the helmet using an adapter with a bayonet-type connector and runs on two commercially available coin cell batteries. The lamp has seven modes in three colours (blue, white and red) that are either continuously on/off or flashing.

Accessories

D-8549-2019

Dräger HPS-COM

The Dräger HPS-COM is a robust, easy-to-install communication unit for firefighting helmets. Thanks to the latest technology, it delivers excellent audio performance. You can choose between two different base units and four microphone options, suitable for a wide range of application scenarios.

D-31629-2020

Face guard

The integrated, ergonomic Apece® visor offers reliable protection from extreme heat, particles and liquid chemicals. It is made to fit a wide range of individual face sizes and shapes, including those of individuals who wear corrective spectacles. The visor is an integral part of every helmet. It offers the best optical quality (optical class 1) and can be continuously swivelled up and down smoothly. The visor is available in two versions: clear and gold (R1). All versions have a permanent anti-scratch coating on the outside and an permanent anti-fog coating on the inside.

D-31628-2020

Eye guard

This optional available, integrated Apece® eye guard can be operated easily and safely with or without fire fighting gloves thanks to two designated grip areas on the sides. It is available in two versions: clear and tinted. Both versions have an permanent anti-scratch coating on the outside and an permanent anti-fog coating on the inside.
