

Dräger M2000 Full Face Mask

The M2000 full face respirator has been specifically designed to meet the demanding requirements of military and security operations. In combination with a suitable filter, it offers enhanced protection against biological and chemical warfare agents, as well as against particulate radioactive substances.

Dräger M2000

Two visors

Distortion-free vision and optimised airflow without fogging

Integrated drinking valve

Staying hydrated during operations and oxygen supply in an emergency, without removing the mask

6-point-harness

Optimal pressure distribution and reduced pressure sensation in the helmet's fit area

Different sizes

Mask body in 3 different sizes for various face shapes

Two filter options

NATO standard round thread filter or special Dräger F2000 plug-in filter with two lockable rotation positions each for left- and right-handed shooters

Benefits

Effective protection

Two filter options are available for the M2000 full face mask: NATO-standard round-threaded filters for use with existing filter stocks, or the special Dräger F2000 plug-in filter. Both filter options offer reliable protection against biological and chemical warfare agents as well as particulate radioactive substances. The plug-in filter allows for positioning for both right- and left-handed shooters and quick filter changes. For additional eye protection, special clip-on lenses can be placed over the visors to effectively protect the eyes against heat flashes.

Optimal wearing comfort - even during prolonged operations

The M2000 offers a high level of comfort for operational personnel, even during prolonged operations lasting over 24 hours. The optimised air circulation effectively prevents the mask's visor and even eyeglasses from fogging up. An integrated hole in the chin pocket ensures that liquids are reliably drained via the exhalation valve. The full face mask is also fitted with a robust textile head harness featuring six attachment points, which offers an optimal fit on the face and even reduces pressure on the helmet's fit area. The special drinking valve also allows the wearer to stay hydrated at any time during the operation without having to remove the respirator.

Optimal fit and rapid operational readiness

The M2000 mask body is available in three different sizes (S, M, L) and the inner mask in two sizes (S, M/L). This ensures a secure and reliable seal for a wide variety of face shapes and contours. The 6-point harness system allows the respirator to be put on easily and securely in operational situations. Four of the six buckles on the harness can be individually pre-adjusted to achieve a secure, tight fit as quickly as possible in an emergency.

Highest compatibility

The M2000 full face mask is compatible with all standard helmets and overgarments used in the defence sector. The integrated speech diaphragm enables clear and reliable communication – including via radio – even in demanding operational environments. Thanks to the different filter positions of the F2000 and the visors positioned close to the eyes, aiming devices and other optical systems can be used without restriction. The mask can also be combined with a CamelBak and other standard hydration systems via an adapter.

Easy to maintain

No special tools are required for the maintenance and repair of the M2000, which makes servicing considerably easier. Thanks to the large number of common parts across all three sizes, spare parts costs and logistics are significantly reduced.

System Components

D-5835-2014

Dräger NBC and civil defence filters

The special filters from Dräger offer civil defence and protection against a wide variety of hazardous chemicals.

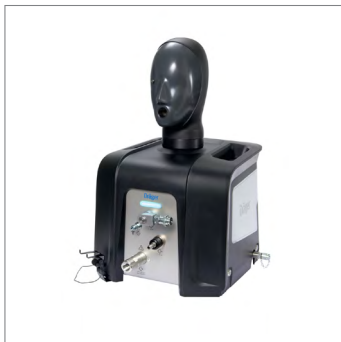

D-7765-2025

Dräger Plug-in filter F2000

The Dräger F2000 is a plug-in filter that allows for quick filter changes and can be positioned to the right or left. The filter provides reliable protection against biological and chemical warfare agents, as well as particulate radioactive substances.

D-1361-2021

Dräger Quaestor 8000

All static and dynamic tests of the Dräger Quaestor 8000 are carried out fully automatically. Controlled by the proven Protector software, each test is carried out intuitively. For you, this guarantees high efficiency through comfort and speed.

Accessories

Spectacle frame for the Dräger M2000

Spectacle frame, can be individually adjusted right and left.

CamelBak adapter for the Dräger M2000

For connecting a CamelBak hydration system to the mask.

Hose adapter for the Dräger M2000

For connection of the mask to a drinking canteen.
