

Dräger PARAT 5550 Filtering Escape Device

The Dräger PARAT 5550 is a fire escape hood packaged in a flame-retardant holster. It was specifically developed for fire rescue teams for use in victim rescue. The main advantage: The PARAT 5550 is system-approved together with Dräger breathing apparatuses according to EN 137:2006, Type 2.

Dräger PARAT 5550

Multiple carrying options*

using the shoulder strap, carabiner hook or the integrated belt loop

Flame-retardant Aramid material

assures quality according to DIN EN 137:2006, Type 2

Optional accessory pockets

for additional equipment like wedges or loops

Easy-to-open

even when wearing gloves, due to the perforated foil pouch

Transparent foil pouch

allows instant visual inspection and at the same time protects against dirt, dust and water splashes

Filter plug

reliably protects the filter throughout the 8 year filter life

Donning instructions

are clearly visible at all times

* PARAT 5550h is designed only to be carried on the shoulder strap of the breathing apparatus.

Benefits

”Ready to act” increases safety

With its EN 137:2006, Type 2 and EN 403:2004 approved combination of breathing apparatus, fire escape hood and holster, Dräger is going one step further in victim rescue. The fire escape hood can be carried along (e.g. on the breathing apparatus) without restricting the rescuer's freedom of movement. When it is needed, it is there. The fast deployment of the PARAT 5550 contributes to the safety of the person being rescued.

Always available, always ready

As it is not always clear in advance whether or not people are inside the scene of the incident, it is recommended to carry a fire escape hood at all times. For at least 15 minutes, a fire escape hood protects against highly toxic fire-related gases, like CO, as well as vapors and particles. Carried at all times, the PARAT 5550 can also save lives in a respiratory protection emergency, for example in the event of a disconnected air supply.

Easy opening, intuitive use

The PARAT 5550 system solution keeps carrying, opening and donning the fire escape hood simple: The wearer opens the holster, removes the foil pouch containing the escape hood, opens it along the perforation — with ease, even when wearing gloves — and helps the person being rescued to don it. A clearly visible pictogram further illustrates the donning procedure.

More than just an accessory

With its reflective stripes, the holster is clearly visible from a distance. The material used is suitable for cleaning in washing machines. The inner label can also be used for personalization, meaning that the holster can be marked with an individual's identification. The holster can be attached to the breathing apparatus using the integrated belt loop with emergency release or the approved accessories like the shoulder harness or the carabiner hook. Please note the PARAT 5550h has horizontal belt loops and is designed specifically to be attached on the shoulder strap of the breathing apparatus. Optional accessory pockets (small and large) for further equipment like wedges or loops can be ordered separately.

Cost efficiency through long service life

The PARAT 5550 has an eight year service life time and the filter is well protected through the filter plugs during this time. So it is uncritical if the unit is stored for some time before use. The filter expiration date is visible from the outside of the foil pouch enabling cost-effective maintenance. Due to the filter plugs, the filter remains protected even in the event that the foil pouch becomes punctured.

System Components

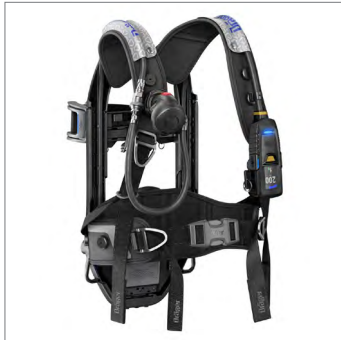

D-42504-2015

Dräger PARAT 5550 Refill Pack

The Dräger PARAT 5550 Refill Pack contains the fire escape hood sealed in the foil pouch. This allows you to cost effectively equip your holster with a new hood after use.

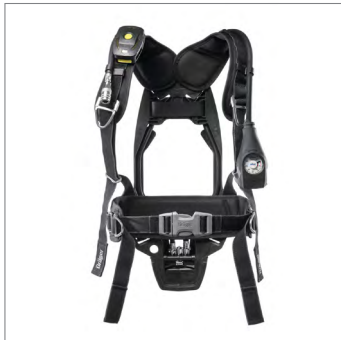

D-17019-2024

Dräger PSS AirBoss

The Dräger PSS AirBoss offers best in class ergonomics and is one of the lightest weight breathing apparatus for firefighting. Lessons learned from firefighters around the world as well as latest innovations in technology have led us to design an even safer and cleaner SCBA system that enables you to breathe more easily and for longer.

D-38071-2015

Dräger PSS 4000

The Dräger PSS 4000 is one of the lightest professional self-contained breathing apparatus for firefighters. Combining comfort with exceptional pneumatic performance, this SCBA is designed for applications where simplicity and ease of use are crucial. Lightweight yet robust, and easy to don, the PSS 4000 provides outstanding breathing protection.

Accessories

D-42513-2015

Dräger PARAT 5500 Accessory Pocket, small

The optional attachable small accessory pocket can be used to carry additional equipment like wedges.

D-42509-2015

Dräger PARAT 5500 Accessory Pocket, large

The optional attachable large accessory pocket has space for bulky items and can be used to carry additional equipment such as loops.

Dräger PARAT 5520 Soft Pack

The Dräger PARAT 5520 is a fire escape hood packed in an ergonomically designed dust-protected (IP5) soft pack. The soft pack can be comfortably worn on the integrated belt loop, shoulder strap, or together with an adapter plate on a grip or belt clip. Additionally, the transparent window allows the filter expiration date and the condition of the device to be checked.

D-92785-2013

Dräger PARAT 5530 Hard Case

The Dräger PARAT 5530 is a fire escape hood packed in a robust dust and splash water (IP54) tested hard case. The hard case can be comfortably worn on the integrated belt loop, shoulder strap, grip or belt clips. Additionally, special brackets are available for wall mounting. The transparent case allows the filter expiration date and condition of the device to be easily seen at all times.

Technical Data

Filter performance	CO P2 combination filter against toxic fire gases, vapours und particles.
Duration of use	at least 15 min
Service life	8 years If the device remains unopened, the filter can be replaced by Dräger Service to extend the service life a further 8 years.
Weight (without accessory pockets)	approx. 706 g
Dimensions (H x L x W)	201 x 160 x 130 mm
Approvals	EN 403:2004, additionally tested for the use against H ₂ S (at 2,500 ppm) in accordance with DIN 58647-7 EN 137:2006, Type 2

Gas filter capacity according to EN 403:2004*

Test gas	Concentration in ppm	Minimum exposure time in min
Carbon monoxide (CO)	2,500 ¹	15
Propenal (acrolein)	100	15
Hydrogen chloride (HCl)	1,000	15
Hydrocyanic acid (HCN)	400	15

* Test conditions: 30 l/min, 70 % relative humidity, test with artificial lung

¹ Additional tests are carried out at 5,000 and 7,500 and 10,000 ppm

Gas filter capacity according to DIN 58647-7*

Test gas	Concentration in ppm	Minimum exposure time in min
Hydrogen sulphide (H ₂ S)	2,500	15

* Test conditions: 30 L/min, 70 % relative humidity, 20 °C / 68 °F
